

CATHEDRAL CITY Community Garden Program

The City of Cathedral City is a proud partner of the **HEALNET Project – HEALTHY EATING ACTIVE LIVING NETWORK**. The purpose of the **HEALNet Project** is to facilitate a comprehensive approach to healthy eating and active living in the Coachella Valley by helping residents recognize the importance of changes in lifestyle to reduce obesity and its negative health effects.

In support of healthier lifestyles, the City of Cathedral City Environmental Conservation Department is offering a unique community garden program for schools and 55+ communities located in Cathedral City. The Environmental Conservation Department will supply the labor and materials to construct and install the garden. The school or 55+ communities will be responsible for the on-going maintenance and gardening.

The community garden program will be designed to meet the special needs for each location. **Funding for this program is limited. Requests will be processed on a first-come, first-served basis.**
